

COGNITION ONE™

A Defense AI System by NeuroForge Technologies Inc.

Patent Pending — NeuroForge Technologies Inc.

Address: 1149 Athlone Circle, Corona, CA 92882

Campaign Title

Cognition One — The World's First Defense AI™

Real-time awareness. Emotional intelligence. Fraud and deception detection—on your face.

Video Script (60 seconds)

[Scene 1] A person negotiates a deal — subtle alert appears.

Voiceover: “Notice his tone shift—pressure detected.”

[Scene 2] A phone call — alert flashes, “Timeline inconsistency.”

[Scene 3] A late-night street — AI whispers, “Unfamiliar voice approaching.”

[Final Scene] Cut to tagline: “Reactive tech answers. Proactive tech anticipates. Defense AI protects.”

Problem

We protect our homes, data, and devices — but not our minds. Deception, manipulation, and fraud thrive because awareness can't keep up with human deceit. Today's AI is reactive, not protective. It listens but doesn't defend.

Solution — Cognition One

Cognition One™ transforms ordinary AI into Defense AI™ — a cognitive shield that listens, sees, and understands context. It senses tone, stress, deception, and risk — warning you before manipulation happens.

How It Works

- Audio & Vision Capture — smart-glasses microphones and cameras stream real-time data.
- NeuroForge Edge Engine — analyzes tone, facial cues, and context locally for privacy.
- Cognitive Risk Score™ — quantifies deception or manipulation.
- Real-Time Alerts — delivers instant defense feedback through subtle haptics, HUD, or whisper audio.
- Adaptive Learning — tailors its model to your unique communication style over time.

Core Features

- Tone & Deception Detection — identifies manipulative speech patterns.
- Behavioral Risk Scoring — quantifies emotional and contextual risk.
- Adaptive Personal Learning — customizes detection based on user baseline.
- Privacy-First Architecture — 100% local processing, encrypted data.
- Cross-Device Compatibility — works with Ray-Ban Meta, XREAL, Rokid, Apple Vision Pro.

Use Cases

- Business negotiations — detect high-pressure or deceitful tactics.
- Law & justice — evaluate testimony consistency.
- Elder protection — prevent fraud and scams.
- Personal safety — alert to potential threat or aggression.
- Social & dating awareness — decode intent before it escalates.

Funding Goal

Goal: \$2.0 million USD

- \$600K — AI development and SDK integration
- \$400K — Cognitive Engine optimization
- \$500K — Smart-glasses interface integration
- \$300K — UX, testing, safety
- \$200K — Legal/IP protection

Reward Tiers

\$50 — Backer badge + “Defense AI Founder” listing

\$250 — Beta access + Lifetime Pro subscription

\$750 — Developer Pro Pack + SDK access

\$2,000 — Founder’s Circle Lifetime License + signed certificate

\$10,000 — Visionary Investor Package + private advisory round invitation

Stretch Goals

\$2.5M — AR HUD Visualization System

\$3.0M — Neural Band Gesture Controls

\$3.5M — On-device Real-Time Translation

\$4.0M — Voice Biometric Risk Recognition

Voice & Tone

Raw. Intelligent. Purpose-driven. The campaign speaks with confidence, not hype — the voice of someone done with being lied to. Cognition One doesn't flatter you; it protects you.

Call to Action

Join the first wave of Defense AI™. Back Cognition One™ and become part of the movement to make awareness the new armor.
